

INSTALLATION INSTRUCTIONS

The water treatment system is furnished with a mounting panel.

1. Turn off water supply line leading to the water treatment system.
2. Mount system on the wall vertically. The system MUST be mounted vertically to function properly. Use 1/4" mounting holes in the mounting panel.
3. Connect water supply line inlet & outlet to 1/2" NPT female threaded manifold.
4. Turn on water. Check for leaks.

Replacement Cartridges Instructions

1. Remove expended cartridge from the bracket.
2. Disengage each plastic line from the cartridge fitting one at a time. On the fitting, press the collet face fully toward the fitting body (fig.3) and then pull the tube out from the fitting body.
3. Discard expended cartridge.
4. Install new cartridge. Inserting the plastic tubes into cartridge fitting (fig.1) one at a time until the tube ends hit a positive stop. (fig 2)
5. To check for a secure connection, pull on the tube with moderate force. The tube should hold in place. Install the new cartridge in the bracket.
6. Turn on the water supply slowly. Check for leaks before leaving installation.

Attach the provided "Cartridge Change Out Monitor" label to the replacement Cartridge. Peel off the blue "service filter" label adhesive & attach it to the right of the arrow on the "Cartridge Change Out Monitor" label. Press the bubble firmly on the "service filter" label to activate the 6 month timer.

Cartridge should be replaced every six months or when scale begins to form in the treated equipment.
Replace Cartridge (Order CCPECR)
